MORE THAN MONEY · MTM EDUCATOR

DEFY

Exhaustion bands, key levels, a trend cloud and a confirmation score. An idea only appears when the readings agree, and the plan stays fixed on the signal candle.

Strategy guide

morethanmoney.pt

STYLE	ASSETS	TIMEFRAMES
Band reversals, with confirmations and stars	Forex, gold, indices and crypto	Any: 1 to 15 minute scalps, 1 hour intraday, 4 hour swing

01

The strategy in a few words

DEFY brings four readings onto one chart: **exhaustion bands** around a smooth average (89 candles by default), **key levels** where price has reacted before, a **trend cloud** and a **confirmation score**.

An idea is born when price stretches into the bands, turns with a strong candle that closes beyond the previous fractal, and gathers at least three confirmations. The score starts at +3 and adds one point for each extra reading: +6 gives one star, +8 two and +10 three. With 10 or more on a gold candle, it is a **King Idea**.

Levels are fixed on the signal candle: entry, Warning (the candle extreme), a stop 1 ATR beyond the Warning and three targets at 1R, 2R and 3R. Nothing repaints after the close.

02

What you see on the chart

The exhaustion bands. Inner, mid and outer around the centre. The outer zones show where price is stretched; the dashed projection covers the latest candles.

The key levels. Zones where price has reacted, spaced apart. Above price they are red, below price blue.

The confirmations. Each reading adds a point: band touches, key level, cloud, momentum, averages, volume, wick, FVG, RSI and structure. The score gives the stars.

03

The confirmations

DEFY counts the confirmations for you. Your part is to read the context and not force weak ideas.

1. Trend: the cloud and candle colours sit on the side of the idea, or the idea is a clear reversal at the outer bands.
2. Band: price touched the inner, mid or outer band before the signal candle.
3. Key level: the reaction happens near a zone where price has turned before.
4. Closed candle: the signal only appears on the close, so it does not disappear later.
5. Score: the more stars, the more readings agree. Use the Idea Filter to hide the weaker ones.

04

Entry and management

1. Choose the entry mode: candle close (safer) or a 50% pullback of the signal candle (more precise, cancelled after 10 candles).
2. Size the position by the risk to the stop, 1 ATR beyond the Warning.
3. Watch the Warning: if price rejects it, the idea has failed. Exit without waiting for the stop.
4. At TP1, protect the position (partial close or stop to entry).
5. Carry on to TP2 and TP3 while the follow-up arrows and the cloud agree.

The plan on the chart. Entry, Warning, stop and TP1 to TP3, with the distance in pips on forex and in points on gold, indices and crypto.

05

When not to enter

- With the score at the minimum and no band touch.
- With price already far from the entry (in pullback mode the idea cancels itself).
- Against a strong cloud, without a clear reversal at the outer bands.
- During high-impact news.
- When the Warning has already been rejected.

06

Target modes

By default the mode is **Standard**: 1R, 2R and 3R. **Squeeze** uses the next bands as targets, for fast scalps. **Stretch** goes to 2R, 4R and 6R and **Swing** to 3R, 6R and 9R.

Targets in R. Risk (R) is the distance from entry to stop. Each target is a multiple of that risk.

07

Pocket checklist

- [ ] Trend or clear reversal
- [ ] Band touch
- [ ] Key level nearby
- [ ] Closed candle
- [ ] Score and stars
- [ ] Size by risk
- [ ] Watch the Warning
- [ ] Protect at TP1
